

# THE UNIVERSAL HIDDEN HANGER BY PETIT

Better than any other ...

- Made from .063" tempered aluminum, as strong as any on the market.
- C-CHANNEL construction for extra strength across gutter span (same as Vampire™ Hangers).
- Plenty of material at back end so most important structural point doesn't weaken.
- Extra buttress at critical point for even greater strength.
- Nail holes angled downward for easy nailing.

In addition, plenty of material is used in our hangers -- more than 3/4" of surface to engage the front edge of the gutter. And the back end is long enough and wide enough so that the hanger will easily and securely grasp the back edge of the gutter.

There are two slotted holes for strapping in applications where that is needed. The installer doesn't have to carry a strap hanger and a hidden hanger in his truck. He just carries a few straps for those locations that require him to strap to the roof. Our strap is good and strong: .063" thick also. The good fit between the strap and the hanger makes for a trouble-free job.

We've taken the best features of every hidden hanger on the market and made a better hanger. It's the best around. Petit talks to people who use these products and asks questions. We've determined what's good about the products available -- and what's not so good. By listening to enough comments we've identified the features that will work in the field and will produce quality when installers go to put up a first rate job.

That's what you have in our hidden hanger -- the best quality and the most practical hidden hanger available. And we've priced it to be a good buy compared to any decent hidden hanger on the market.
