

# THE MONSTER HANGER

by Petit Tool  
Stronger by design...

- Made from .063" 5052-H32 tempered aluminum.
- U-Channel construction for extra stiffness.
- Full 1 1/2" wide front and rear to resist bending under heavy load.
- Three staggered holes for better attachment without splitting the fascia.
- Extra drop in back for ease of installation.

The **Petit MONSTER hanger** gives you extra strength whenever you need it—high snow load, steep pitch roof, long runs. The key to its strength lies in the superior design and quality construction. It is precision stamped from .063" 5052-H32 aluminum; this is the tough stuff, made from virgin ingot—no scrap allowed. We built this hanger with an extra deep drop in the back so you can get under the drip edge and still have room for your screws or nails. The holes are staggered across the wide tab in the back so you won't split the fascia board if you use multiple fasteners; this also gives you a better chance of hitting the rafter end. This hanger will really impress a prospective customer.
