

THE PETIT END CAP

Designed to make gutter installation easier

- DEEP DRAW FOR SECURE CRIMPING ONTO GUTTER.
- UNIVERSAL FIT – WORKS WELL WITH ANY FIVE INCH K-STYLE GUTTER.
- TOOLED TO ELIMINATE UNSIGHTLY CREASES AND PAINT CHIPPING.
- TOP QUALITY AT A GOOD PRICE.

All end caps look the same, until you examine them closely. The shape of the end cap is critical. It determines how well the part will join up with the gutter right off any seamless machine.

Many important details determine the quality of the end cap. The flare of the external lip is important to an easy fit. Even a perfect shape with too tight a lip would be difficult to place on the gutter. The depth of the draw when the end cap is made determines how well it will be crimped or riveted. The depth of draw must be uniform for a neat installation.

Petit makes the best end cap around. We've made it to fit the widest variety of gutter machines. We've flared the lip wide enough to make fit up easy. Our draw is a minimum of 3/8 inches all around. Available in most standard gutter colors in sturdy .024" Aluminum.
