

The Petit Gutter Screw

Custom designed for hanging gutters

A simple gutter screw is actually a complex combination of lots of different design details; from head to point, here is a summary:

- 1** Our screw head is over 30% taller for better contact with the magnet set in your driver, so you don't drop screws.
- 2** We have an oversized washer to capture more of the back of the gutter....*(That's what holds it up!)*
- 3** The shaft under the head is unthreaded to help with the final pull-up.
- 4** The screw body is bigger than standard for 20% more strength.
- 5** We use a double-lead thread with a faster pitch—the screws drive quicker *and* extend battery life.
- 6** The actual thread form is sharper, like on a furniture screw, to hold better in wood.
- 7** The threads go all the way to the point for quicker engagement.
- 8** We have an extra sharp needle point to prick the aluminum gutter.
- 9** The protective zinc plating is twice as thick as a standard commercial finish...*and* then a baked-on wax is added to make driving easier.

We've worked hard on the design, so our screws will work hard for YOU!

Remember to set the clutch properly on your screw gun.

*You want to drive it just until it pulls up snug;
if you over torque it, you will weaken the shank.*
